Re: Compliance Assessment Review - Errors and Omissions
Docket No. 2021-02, Antrim Wind Energy Facility

Dear Mr. Evans and Committee Members:

Does the Committee really understand why neighbors complain about wind turbine noise? Or do they believe and trust:

1. Noise experts that cannot report hearing a wind turbine during measurements.
2. SEC peer review that determined natural wind sounds are louder than wind turbines.
3. Unattended 'dumb' sound level meters are more reliable than neighbors' *hearing*.

Why were there no neighbor complaints before wind turbines started operating?

Epsilon made assurances during AWE permitting that the predicted loudest wind turbine noise would not exceed 38 dBA. Post-construction noise measurements are frequently louder than 40 dBA. This makes no sense when ambient background levels are less than 30 dBA.

Please feel free to contact me. Thank you.

Respectfully,

Stephen E. Ambrose, ASA, INCE, 1981 Board Certified, emeritus
